NEW QUESTION: 1

Ein Netzwerktechniker konfiguriert eine OSPFv2-Nachbar-Nachbarschaft. Ziehen Sie die Parameter von links auf die erforderlichen Kategorien rechts. Es werden nicht alle Parameter verwendet

Answer:

Explanation:

NEW QUESTION: 2

What is the default HSRP priority?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: B

NEW QUESTION: 3

A company} is formulating its plans for the coming year, including the preparation of its cash budget. Historically, 30% of the company's sales are cash sales. The remaining 70% are credit sales with the following collection pattern.

Sales for the first five months of the coming year are forecast as follows.

For the month of April, the total cash receipts from sales and collections on account would be:

- A. US \$4,025,200
- B. US \$3,781,600
- C. US \$3,729,968

D. US \$4,408,000

Answer: B

Explanation:

The cash receipts for April equal April's cash sales US \$4,000,000 x 30% = US \$1,200,000), 40% of April's credit sales, and 580/o of March's credit sales. Consequently, total cash receipts equal US \$3, 78-1,600 [$\$1,200,000 + \$4,000,000 \cdot 40\% \cdot 70\%$) + $\$8,600,000 \cdot 68\% \cdot 70\%$]. A bank has two drive-in lanes to serve customers: one attached to the bank itself and one on an island. One teller serves both stations. The bank is interested in determining the average waiting times of customers and has developed a model based on random numbers. The two key factors are the time between successive car arrivals and the time customers wait in line. Assume that the analysis begins with cars just arriving at both service windows, both requiring 3 minutes of service time. Car 1 is the attached window attached to the bank unless that window has more cars waiting than the island window. The lone teller will always serve the car that arrived first. If two cars arrive simultaneously, the one at the attached window will be served before the one at the island.
